

Manas Khare

manaskhare63739@gmail.com | +1 (602) 743-5297 | Tempe, AZ | www.linkedin.com/in/manas-khare-3b377818b/
Software Engineer | Full Stack Systems | Machine Learning & NLP

Summary

Software engineer with industry experience building full stack applications using Java, SpringBoot, and React. Currently pursuing a Master's in Computer Science and expanding into machine learning and NLP, with a strong interest in designing scalable, intelligent systems that combine software engineering with data driven solutions.

Education

Master of Science in Computer Science

Arizona State University – Tempe, AZ

Aug 2025 – Present

B.Tech in Computer Science – CGPA: 8.42/10

SRM Institute of Science and Technology – India

June 2019 – June 2023

Certifications

Machine Learning – Stanford University

ML Foundations – University of Washington

Oracle Cloud Infrastructure Foundations – Oracle

Experience

Software Development Intern

Jun 2026 – Aug 2026, Sep 2026 – Present

Ramsey Products Corporation

Remote

- * Rebuilt a legacy ASP engineering drive-selection program as a React + Node/Express web app on MySQL/MariaDB, running live against production; migrated all customer records and historical calculations with zero data loss.
- * Reproduced the published horsepower rating tables from source, compressing ~231K values into 817 interpolation breakpoints (~99.6% smaller) with error under 10^{-6} .
- * Built a sales dashboard with per-company drill-down, follow-up opportunity lists, and a scheduled email digest; implemented HMAC-signed role-based tokens, script password hashing, and invite-based onboarding.
- * Fixed calculation defects the legacy system concealed, including a rounding bug in centre-distance output, and built a 48-test regression suite against engineering reference data that surfaced and resolved discrepancies.

Software Developer

Sep 2024 – July 2025

EQG Glassmach

Por, Gujarat, India

- * Contributed to building an order management system that streamlined processing and improved resource accessibility for internal teams.
- * Collaborated with cross-functional teams to gather requirements, develop features, and resolve bugs.

Associate Engineer

Mar 2024 – Sep 2024

Brillio

Bengaluru, Karnataka, India

- * Designed and implemented software solutions aligned with client requirements using SpringBoot, React, and MySQL.
- * Improved application efficiency by optimizing APIs and using microservices like Eureka and collaborating across teams for feature delivery.

Software Developer Trainee

June 2023 – Feb 2024

EQG Glassmach

Por, Gujarat, India

- * Led customer-site installations for key projects, ensuring on-time deployment and smooth adoption.
- * Developed order management software that improved operational efficiency and resource accessibility.

Projects

ClashCheck || *Node.js, Express, Claude API, Chrome Extension*

- * Won 1st place among ~30 teams at the Design Experiences × Fulton Ambassadors Hackathon (ASU) with an assessment-collision radar that lets professors check a proposed exam date against students' anonymous course load.
- * Built syllabus and Canvas calendar (.ics) extraction with the Claude API (regex fallback) and a Chrome extension that shows students grade-weighted priority flashcards on Canvas.

Hey Max – Local Voice Assistant || *Python, Ollama, Qwen3, faster-whisper, sherpa-onnx, Piper*

- * Built a private, fully offline voice assistant: wake word, speech recognition, LLM reasoning, and text-to-speech all run on-device, with a tool-calling agent that controls apps, files, media, notes, and power settings.
- * Routed commands to qwen3:4b with on-demand escalation to qwen3:8b, gated risky actions behind spoken confirmation, and hardened wake-word detection with 4 staggered decoders and auto-gain.

Autonomous Deployment Agent || *Python, Vision Transformers (ViT-Tiny), Playwright, Chromium*

- * Built an ML-driven agent that learns UI interaction workflows from recorded trajectories to autonomously deploy applications through the Vercel dashboard.
- * Implemented a Vision Transformer (ViT-Tiny) for pixel-level UI understanding and integrated it with Playwright-based browser automation to complete the full deployment pipeline from project creation to live deployment.

Greenify || *HTML/CSS, JavaScript, Firebase, Python, Machine Learning*

- * Developed a web app that detects plant diseases using machine learning, enabling users to identify infections early and take preventive measures.

coWin Vaccine Slot Booking Bot || *HTML/CSS, JavaScript, Google Dev Tools*

- * Built an automation tool to book vaccination slots, supporting custom preferences (location, age group, dates) for users.

Field Engineer Task Management System || *HTML/CSS, JavaScript, React, Java, SpringBoot, MySQL, Eureka*

- * Engineered a system to assign, prioritize, track field tasks based on service type, location, and resource availability.
- * Integrated scheduling logic and task allocation, reducing manual effort.

Achievements

1st Place among ~30 teams in the Design Experiences × Fulton Ambassadors Hackathon, Ira A. Fulton Schools of Engineering (Sep 2026).

Top 25 teams in Zeta Hacks out of 200+ teams.

Top 5 teams in HackBMU 4.0.

Secured 1st Position in Hack-A-Code among 35 teams.

Technical Skills

Languages: Java, Python, C, C++

Full Stack Development: HTML5, CSS3, JavaScript, React, REST APIs

Backend & Systems: Spring, SpringBoot, Microservices Architecture

Databases: MySQL, Firebase

Machine Learning & NLP: Supervised Learning, Model Training, Data Preprocessing, NLP Fundamentals

Tools & Platforms: Git, GitHub, GitLab, Oracle Cloud Infrastructure

Concepts: Object-Oriented Programming, Distributed Systems Basics, Software Design, API Development
